- Suppose a
- Also note b
 - This entails
 - Remember also
 - I almost forgot
 - Envision

Equations

$$f(x) = \sum_i wx_i^2 + \frac{\beta}{2}$$

Columns and Figures

1. Consider A
2. ... do not forget B

Code

Note the [fragile] specifier next to frame and the code indentation.

```
import numpy as np

def foo(a, b):
    """
    asd
    """
    return a + b + 1
```

The beamer template contains definitions for all Helmholtz colors.

Color	Name
	hgfbue
	hgfdarkblue
	hgfgreen
	hgfggray
	hgfaerospace (short: hgfast)
	hgfearthandenvironment (short: hgfee)
	hgfenenergy
	hgfhealth
	hgfkeytechnologies (short: hgfk, hgfinformation)
	hgfmatter

For each color there exist 10 lighter shades, exemplary for hgfbblue

Color	Name
	hgfbblue10
	hgfbblue20
	hgfbblue30
	hgfbblue40
	hgfbblue50
	hgfbblue60
	hgfbblue70
	hgfbblue80
	hgfbblue90
	hgfbblue

Sections look like this
